FOR IMMEDIATE RELEASE

HμREL® Corporation Opens New, Expanded Laboratories and Corporate Headquarters in North Brunswick, New Jersey.

NORTH BRUNSWICK, NJ, JUNE 22, 2016 - Hurel Corporation, a world-leading maker of cell-based microliver models that deliver human-relevant prediction to scientists in pre-clinical drug discovery and the safety-testing of environmental and industrial chemicals, today announced the opening of its new corporate offices and laboratories, situated within the Technology Centre of New Jersey on U.S. Route One in North Brunswick.

Commenting on the opening, Hurel CEO Rob Freedman said, "Our new corporate offices equip us to respond even faster and more effectively to our customers, while our expanded labs endow Hurel with the capacity to meet the accelerating demand we are experiencing in the marketplace. An important aspect of our North Brunswick location is its proximity to the three international airports of the metro New York region, through which we air-ship our products to life sciences centers in Europe and Asia as well as throughout the United States."
